

## **What will students learn?**

The course covers the system for problem solving, its possible problem solving strategies, and the supporting mathematical concepts.

Getting the right answer is only of secondary importance. The primary goal is to understand and apply the methods. Therefore, writing down or articulating on how to get the answer is more important than getting the correct answer.

Working on problem solving math problems can be like solving puzzle games. They can be fun and challenging at the same time. Being able to solve them can be a very fulfilling experience.
